

Mapping Tender Green and Autumn Color using GCOM-C Statistic Data

Masataka TAKAGI, Kochi University of Technology
Msayuki Matsuoka, Mie University
Rie Honda, Kochi University
Atsuko Nonomura, Kagawa University
Shin Akatsuka, Kochi University of Technology

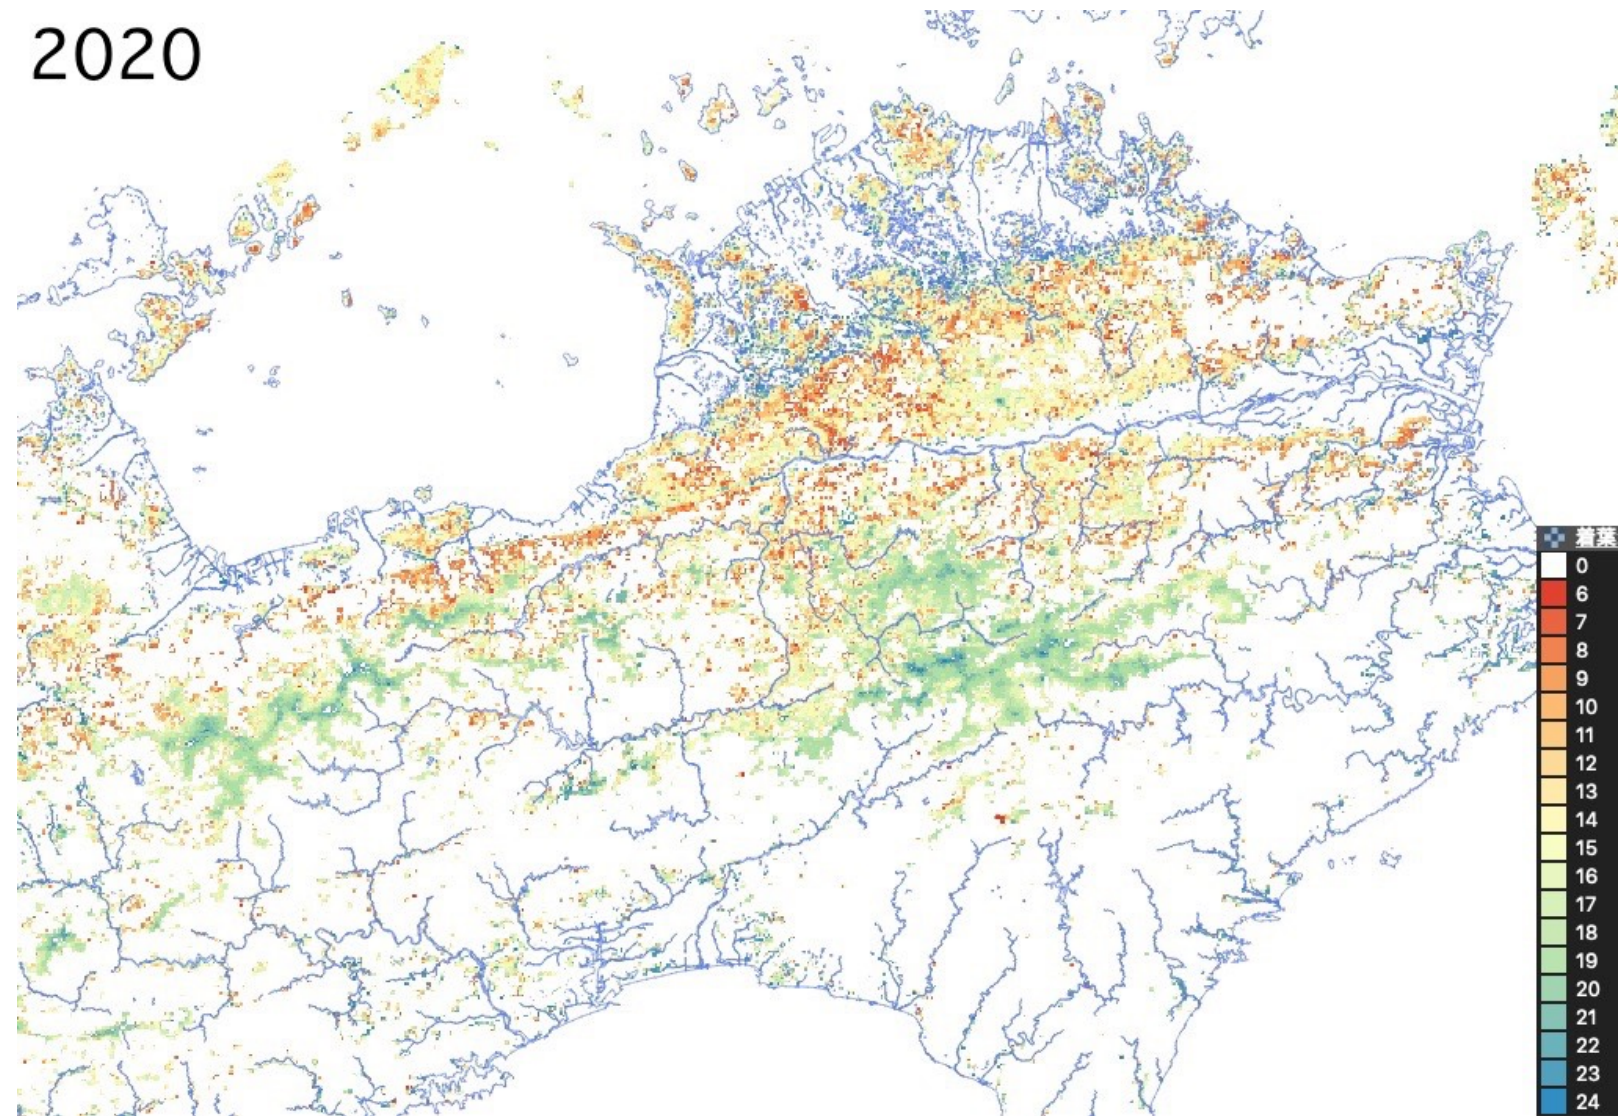

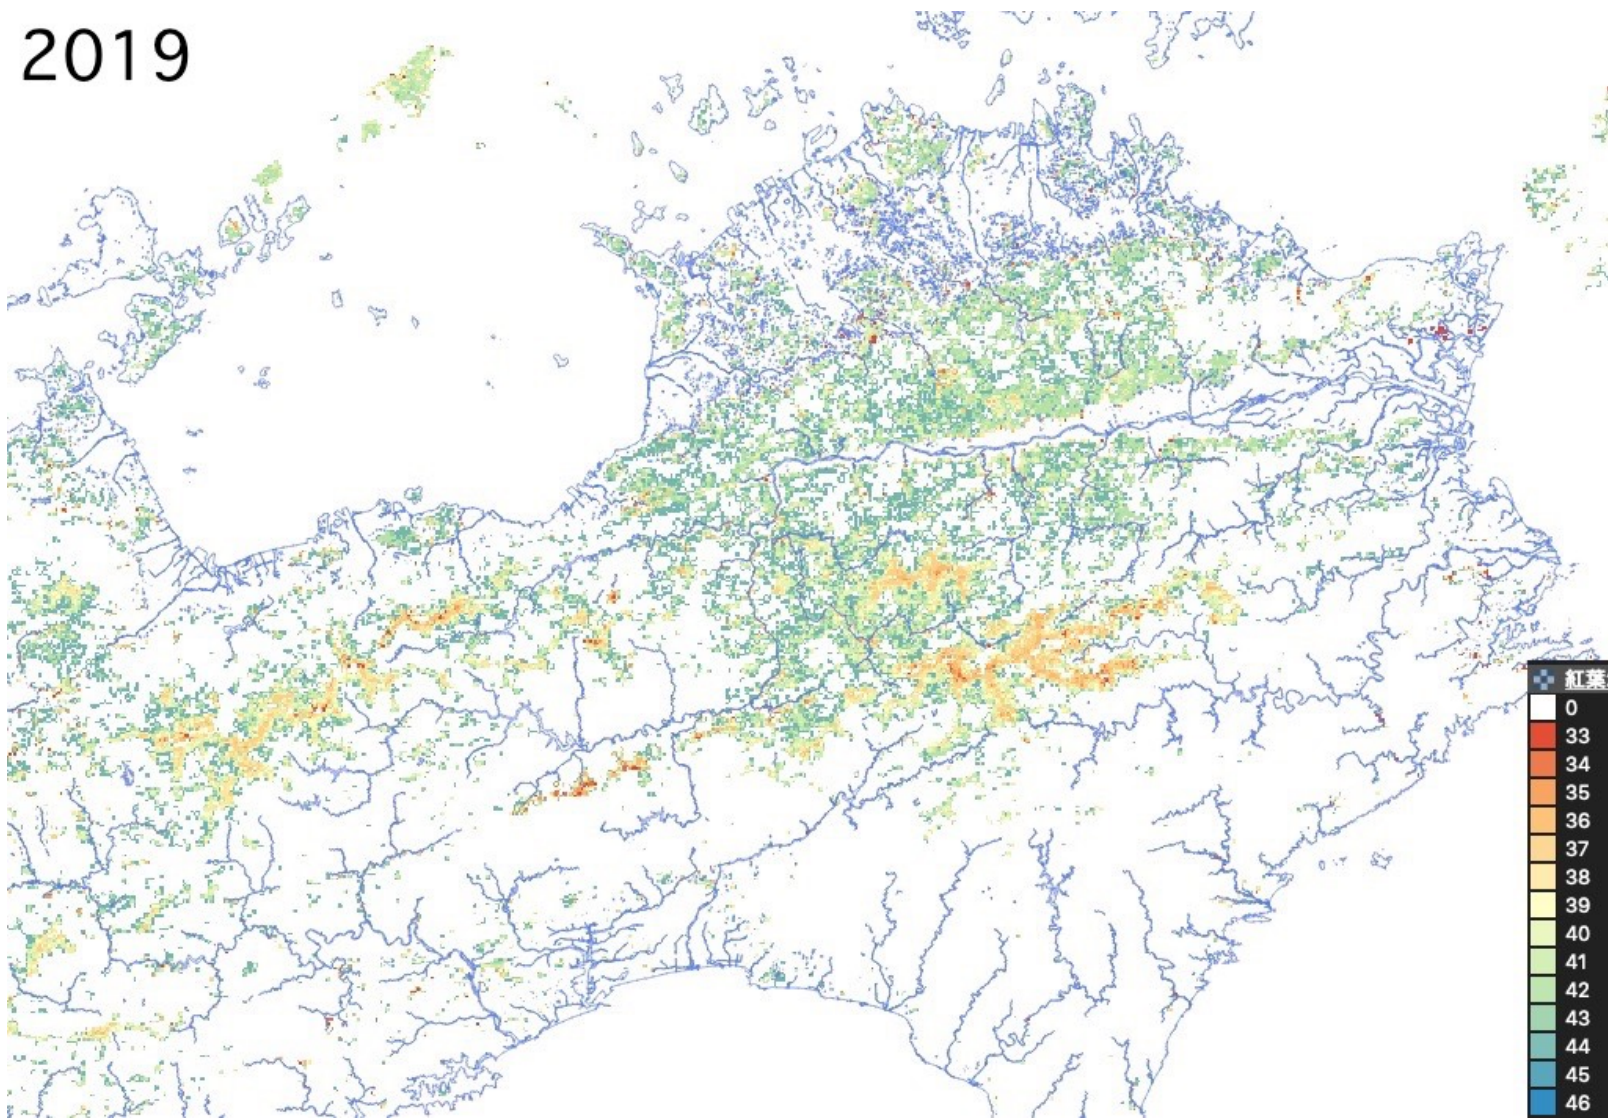

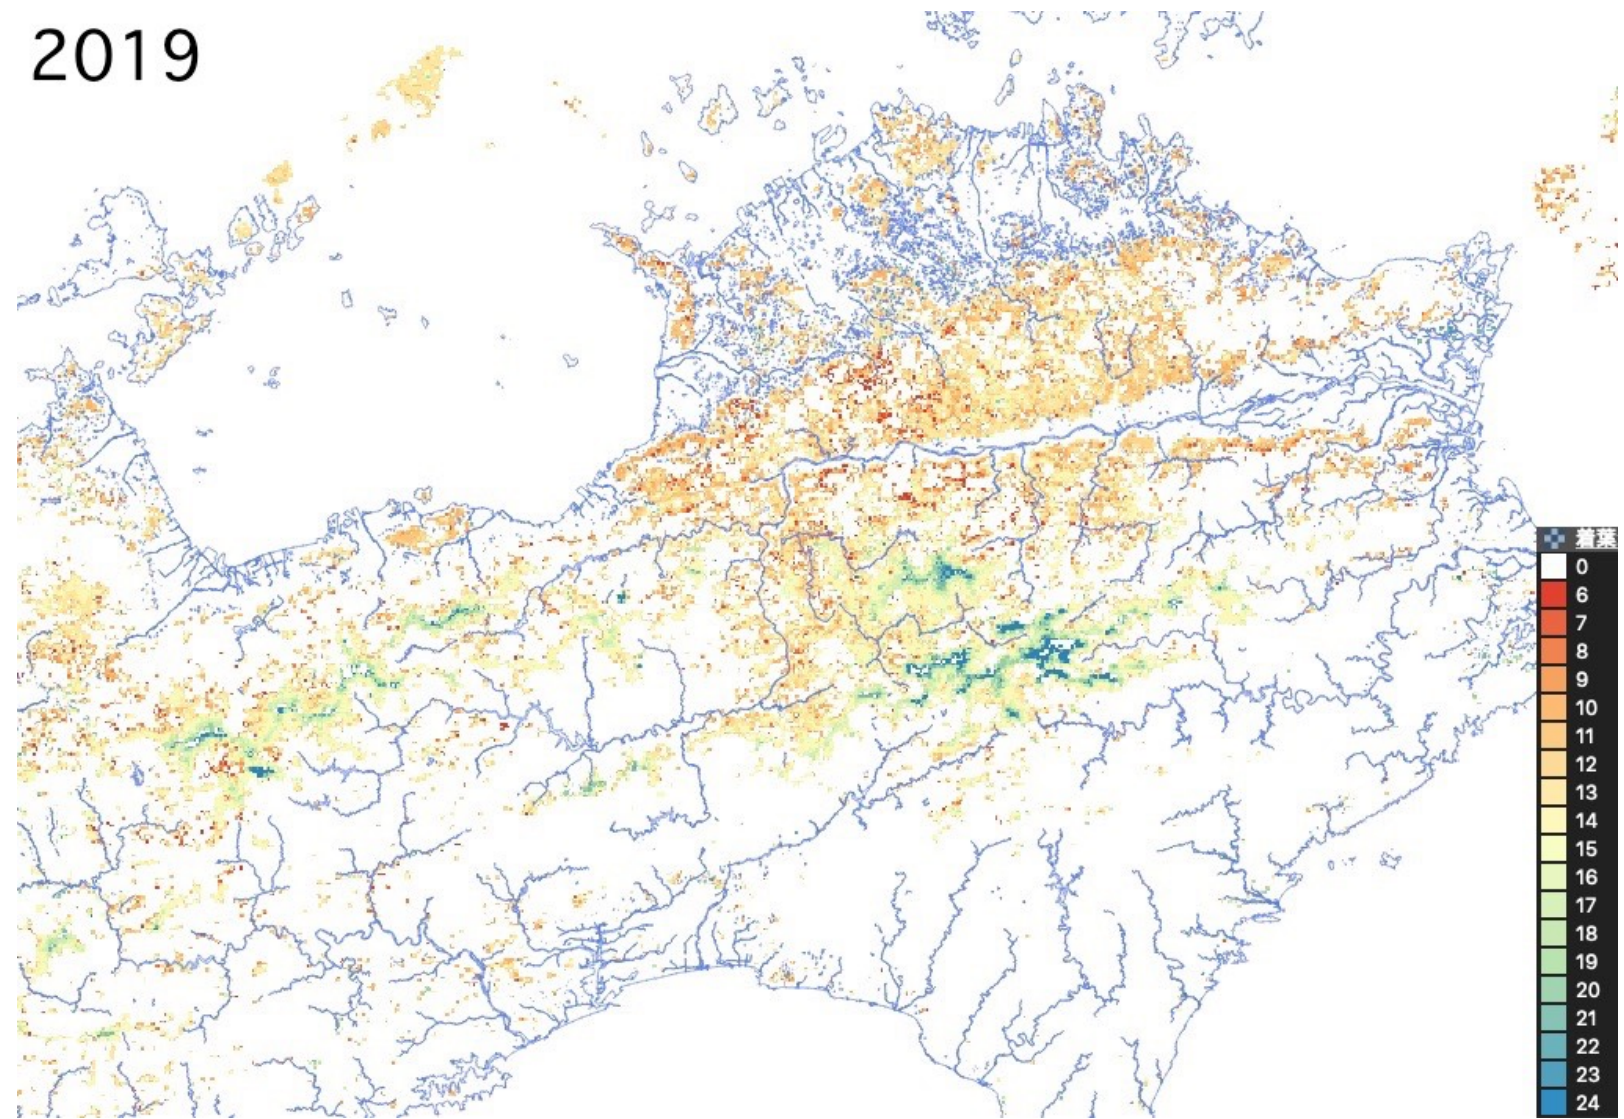

Used Data

- Level2 Statistics 8-Days
- Tile: No. v05h29
- Period: 2018 - 2021
- Used Band for Normalizing Spectral Data by Band Sum
 - VN2, VN3, VN7, VN8, VN10, VN11
- Target Area: Shikoku, Japan

Validation using UAV and Sentinel2

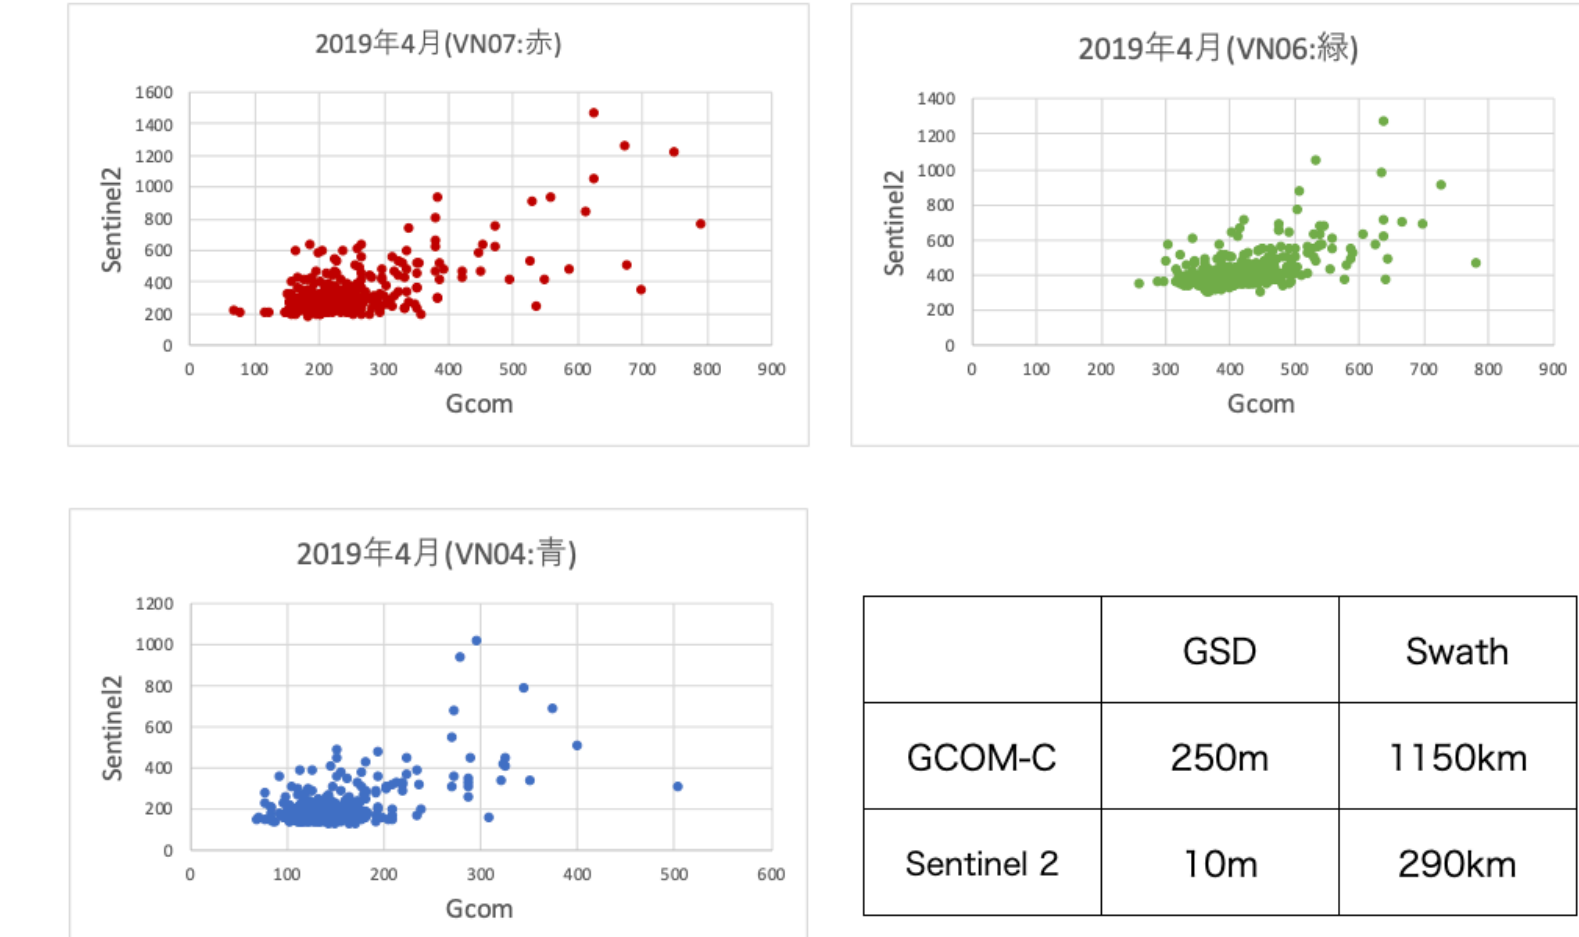

Correlation between UAV image and Sentinel 2

Validation using Sentinel2 and GCOM-C

Correlation between Sentinel 2 and GCOM-C

Conclusions

- Tender green and autumn Color were mapped using NDVI, GCOM-C 8Days statistic data.
- 0.75 was threshold value of NDVI for decision.
- The accuracy using monitoring site showed almost one week.
- Another validation method should be suggested.
 - UAV: Image correlation showed high with Sentinel 2. However, scale with GCOM-C is too different.
 - Sentinel 2: Image correlation showed low with GCOM-C. The reason should be clarified for the validation.
